

PUBLIC HEALTH & ENVIRONMENT

SUPPORTING HEALTHIER COMMUNITIES AND MANAGING STORMWATER

The I-5 Rose Quarter Improvement Project includes investments designed to improve environmental conditions and support public health in and around the district.

On local streets, the project supports **safer and more accessible walking and biking conditions**, making it easier for people to choose active transportation options. These improvements can contribute to better health outcomes by supporting physical activity and reducing exposure to traffic-related safety risks.

The project also includes **new stormwater management systems** that will capture and treat runoff from the roadway before it enters the Willamette River, helping to remove pollutants and improve water quality.

Together, these investments will help improve water quality and provide a healthier environment for people who live, work and travel in the Rose Quarter.

Stormwater Treatment and Water Quality

New treatment systems capture and filter runoff before it enters rivers and streams.

Healthier Travel Options

Improved walking and biking conditions support active transportation and overall well-being.

Safer, More Comfortable Streets

Street design improvements create a more welcoming environment for people traveling through the area.
